

Draft Version 1.0
WhisperBack

Application Name: WhisperBack

- **Background color: Please select color from image below.**

- White font
- **Under logo following sentence should appear:**
Your Personalize Audio Whisperer

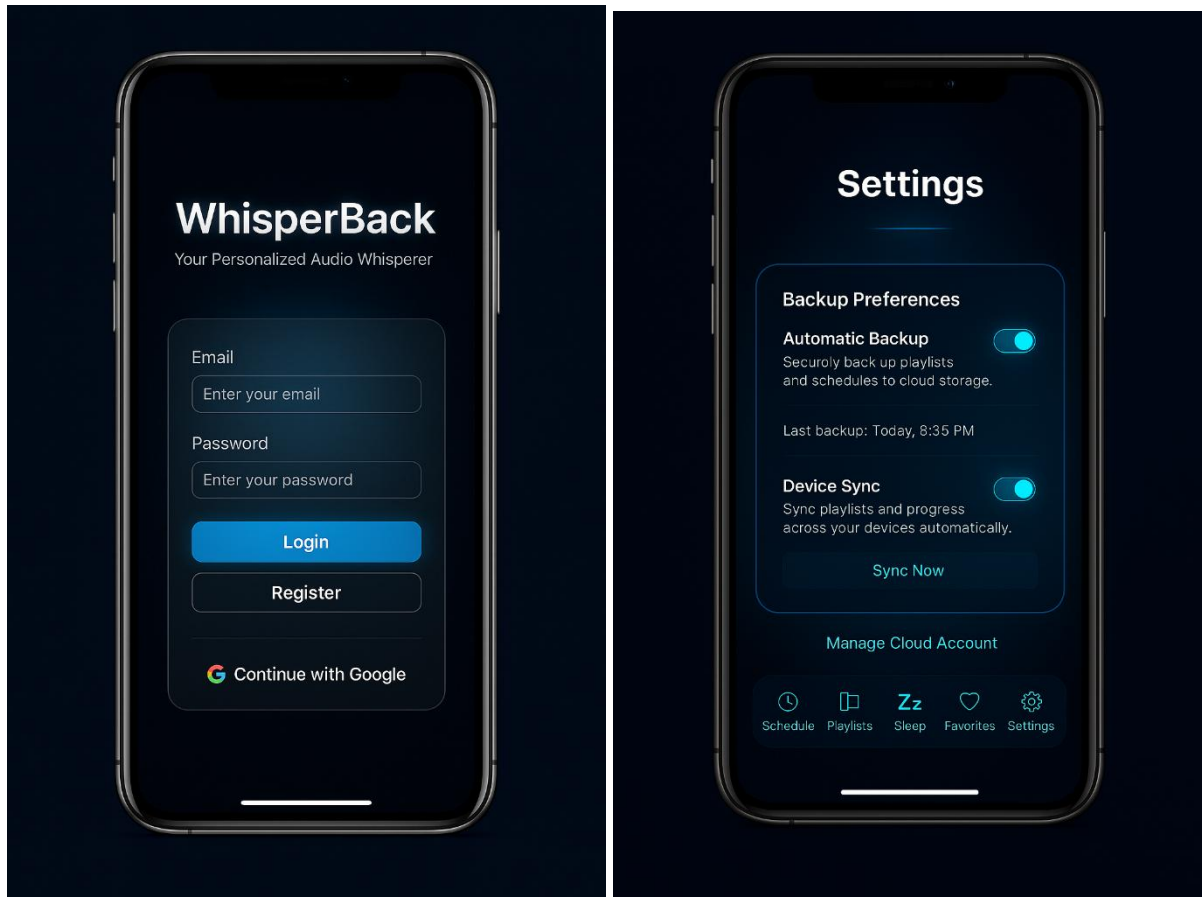

Draft Version 1.0

WhisperBack

Login Screen

- a) Please make color combinations consistent.
- b) Can be login through google.
- c) The account may help user to upload playlists
- d) Can download playlists after reinstall
- e) Can make available playlists on website of the app for others to download or play.

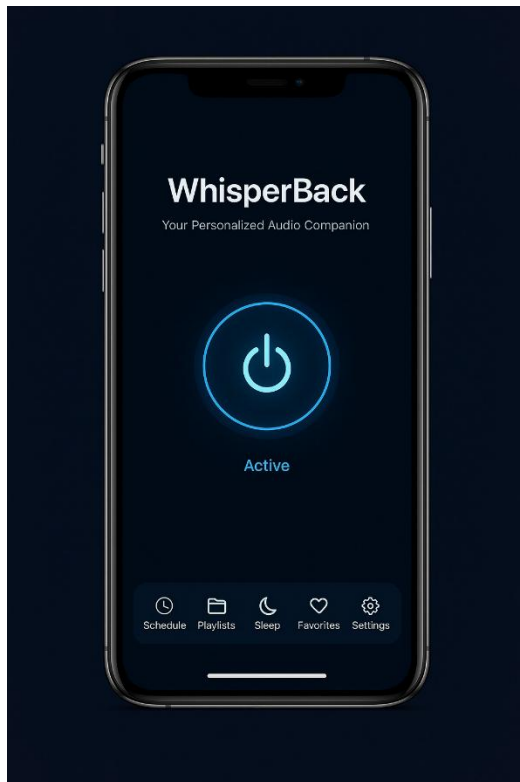

Draft Version 1.0

WhisperBack

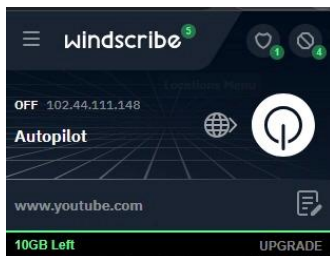

Core FEATURES

Feature 1 - [Active and Inactive] App level functionality

- a) **Active:** Means the application is active and schedules will be playing.
- b) **Inactive:** The application is not active, and nothing is playing
- c) Only on home screen One central ON/OFF button
- d) The center button should rotate when toggled for active or inactive.
- e) Color changes only when Active
- f) No “Active / Inactive” text shown
- g) The moon should be Zzz [sleep mode] icon, Zzz icon = Sleep Mode
- h) Shuffle must NOT appear here

Example

Draft Version 1.0

WhisperBack

Core Feature 2: Playlists

Overview

Users can organise audio clips into playlists, manage them easily, and play them manually or via schedules without conflicts.

Feature: Playlists

- Users can create multiple playlists
 - Minimum playlists: 1
 - Maximum playlists: 50 (or any recommended configurable limit)
 - Basic: 20, Premium:
- Playlists can be: Created, Renamed, Edited, Deleted
- Playlist names must be unique (soft validation with warning)
- Playlist duration is automatically calculated based on clip lengths

Audio Clips in Playlists

- Each playlist can contain multiple audio clips
 - Minimum clips per playlist: 1
 - Maximum clips per playlist: 20–50 (or more?)
- A single audio clip:
 - Can exist in multiple playlists
 - Can be copied to favorite folder

Converting Sound Bites into Playlists

- Imported or recorded sound bites appear in a Clip Library or default folder
- Users can:
 - Add clips to one or more playlists via checkbox or “Add to Playlist”

Playlist Playback Rules

- Playlists can be:
 - Played manually
 - Paused
 - Stopped
 - Shuffled (optional toggle)
- Manual playback is independent of schedules
- Playback UI opens as a popup modal, not a separate screen
 - Popup includes:
 - Playlist name
 - Current clip name
 - Play / Pause / Stop
 - Shuffle toggle
 - Close button (top-right)

Scheduling & Conflict Management

- Multiple playlists can be scheduled

Draft Version 1.0

WhisperBack

- System must prevent time conflicts
 - No two playlists may play at the same time
- Conflict handling:
 - If user selects overlapping times, show a clear warning
 - User must adjust timing before saving
 - Maximum total scheduled playlists: **10–20 (need to check whats a reasonable no.)**

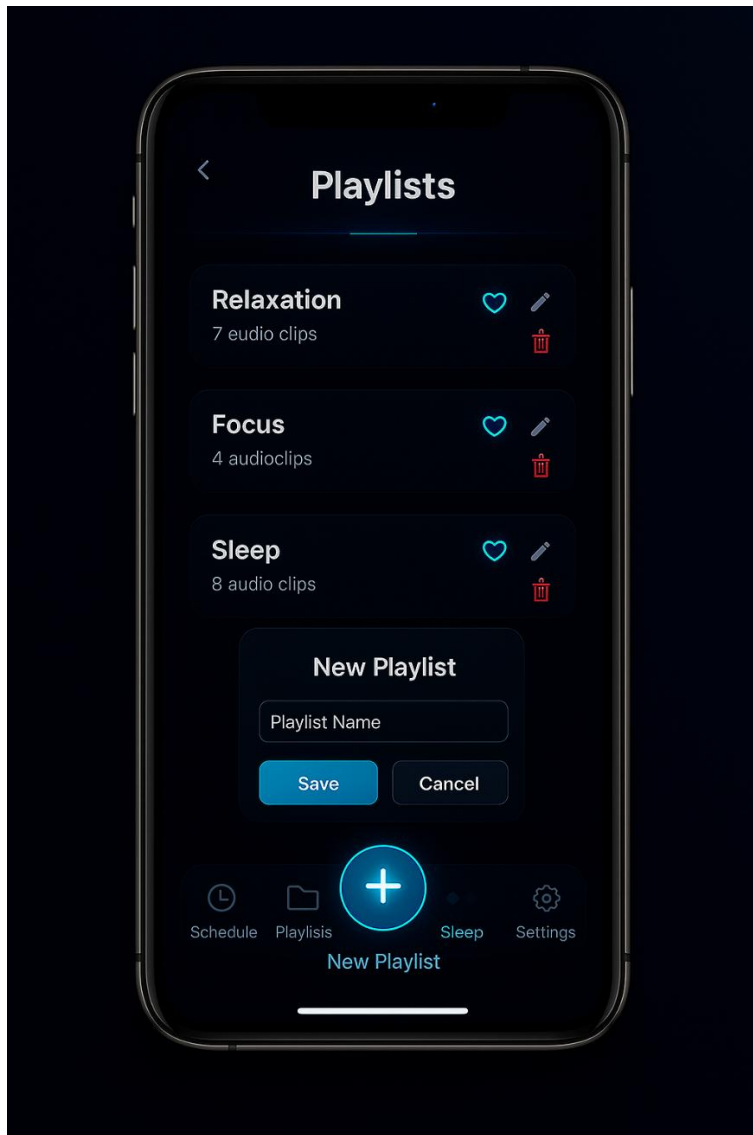

Import & Status Feedback

- When importing or adding clips:
 - Show a progress indicator (percentage or progress line)
 - Show total clips added / remaining
- On completion:
 - Success confirmation message
 - Error message if any clips fail to import

2.7 UX & Behaviour Notes

- Playlist playback popup:
 - Must not interrupt background navigation
 - Can be closed without stopping playback (optional setting)
- Clear visual indicators for:
 - Active playlist
 - Scheduled playlist
 - Currently playing clip
- The popups must have close button on top right.

Draft Version 1.0
WhisperBack

Core Feature 3: Schedule Playlist

Overview

Users can schedule playlists to play automatically, with defined time intervals between clips. Scheduling is playlist-based, editable, and conflict-safe.

Preconditions

Before a schedule can be created:

1. The application must be running (foreground or active state)
2. At least one playlist must already exist

Schedule Creation

- Users can assign a schedule to an existing playlist
- Scheduling requires defining a fixed interval between clips
 - Interval options: 1, 2, 3, ... up to 60 minutes and 1, 2, 3... hours (user choice for minutes or hours)
- Intervals apply between clips within the playlist
- Schedule start time is user-defined
- Each playlist can have:
 - 0 or 1 active schedule at a time

Schedule Editing

- Users can:
 - Edit the interval time
 - Edit the start time
 - Enable or disable shuffle
- Changes take effect immediately after saving
- Editing a schedule must not require recreating the playlist

Schedule Removal

- Users can remove a schedule from a playlist
- Removing a schedule:
 - Stops all future automated playback for that playlist
 - Does not delete the playlist or its clips
- Confirmation prompt shown before removal

Conflict Prevention Rules

- The system must:
 - Detect overlapping schedules
 - Prevent saving conflicting schedules
 - Show a clear warning with guidance to adjust timing

Draft Version 1.0

WhisperBack

Scheduled Playlists Screen (Overview UI)

The scheduled playlists screen displays a **summary view only**, showing:

- Playlist name
- Created date/time
- Interval time
- Shuffle status (Shuffled / Ordered)

No clip-level details are shown on this screen.

Behaviour Notes

- Scheduled playback:
 - Runs automatically based on interval
 - Can be paused or stopped manually
- Manual playback does not cancel the schedule unless explicitly stopped
- System must handle app interruptions gracefully (call, notification, screen lock)

Core Feature 4: Shuffle

Overview

Shuffle controls the order of audio clip playback within a playlist or schedule. When enabled, clips are played in a randomized sequence until all clips have been played once, after which the shuffle cycle restarts

Shuffle Logic

- When shuffle is enabled:
 - All clips in the playlist are randomly ordered
 - Each clip is played once per cycle
 - No clip repeats until all clips have been played
- After the last clip is played:
 - Shuffle automatically restarts with a new random order
- Shuffle applies only to clip order, not to timing or intervals

Shuffle States

- Shuffle has two states:
 - ON  use this symbol
 - OFF 
- When OFF:
 - Clips play in the defined playlist order
- Shuffle state persists until the user changes it

Per-Playlist Shuffle

- Each scheduled playlist has its own **shuffle toggle**
- When enabled:
 - Clips play in random order at each interval

Global Shuffle

- A **global shuffle toggle** is available on the screen
- When enabled:
 - All playlists switch to shuffle mode
- If user wants different behaviour:
 - Individual playlists can be selected and overridden manually

Shuffle UI Requirements

- Shuffle icon:
 - Standard shuffle symbol with white lines
- When shuffle is enabled:
 - Icon displays a white circular outline
- When disabled:
 - Icon appears without the circular outline

Draft Version 1.0

WhisperBack

- Icon placement:
 - Must be accessible in:
 - Playlists screen
 - Individual playlist screen
 - Scheduled playlists overview screen

Core Feature 5 – Sleeping Mode (Temporary Playback Pause)

Overview

Sleeping Mode allows users to temporarily pause all audio playback for a defined time period. During Sleeping Mode, no playlists or schedules are allowed to play. Once the sleep period ends, the app automatically resumes normal scheduled behavior.

Core Behaviour

- Sleeping Mode pauses all audio playback
- No playlist (manual or scheduled) may play during this mode
- Once the sleep duration ends:
 - The application returns to active mode
 - Previously scheduled playlists resume automatically
- Sleeping Mode does not delete or modify schedules

Preconditions

- The application must be ON / active
- Required permissions must be granted (time, notifications, location if applicable)

Sleep Mode Configuration

- Users can set Sleeping Mode by:
 - Selecting a start time
 - Selecting a duration or end time
- Supported durations:
 - Minutes or hours (e.g. 30 min, 1 hr, 2 hrs, custom)
- Sleep Mode timer must be:
 - Editable
 - Cancelable at any time

6.4 Multiple Sleep Modes

- Users can create multiple Sleeping Modes
 - Example use cases:
 - Sleeping hours
 - Study time
 - Meetings
- Only one Sleeping Mode can be active at a time
- If multiple Sleep Modes overlap:
 - The system automatically merges them into a continuous pause window

Special Sleep Mode – Muslim Prayer Times

- A dedicated Prayer Sleep Mode is available
- Behavior:
 - App automatically enters Sleeping Mode during prayer times

Draft Version 1.0

WhisperBack

- Playback resumes once prayer time ends
- Requirements:
 - Mobile location must be ON
 - App uses:
 - Device location
 - Web service to map local prayer times
- If location is OFF:
 - App shows a clear prompt asking the user to enable location
- This option can be configured during:
 - App installation (recommended)
 - Or later in settings

Sleep Mode Priority Rules

- Sleeping Mode overrides:
 - Playlist playback
 - Scheduled playback
 - Shuffle behavior
- Priority order:
 - a) Sleeping Mode (highest)
 - b) Scheduled playlists
 - c) Manual playback

Important: If the application is set to Inactive (OFF), playback must not resume after Sleep Mode ends.

Playback may resume only if the app state is Active (ON).

Sleep Mode Screen & UI

- Sleeping Mode is accessible via a dedicated screen
- UI elements include:
 - Zzz icon to indicate Sleeping Mode
 - Active / inactive state indicator
 - Start time and end time
 - Edit and cancel options
- When Sleeping Mode is active:
 - A subtle indicator is shown across the app

Explanation & Help (UX Requirement)

- Sleeping Mode includes an info (i) icon
- On tap, show explanation text:

“Sleeping Mode is a time gap of your choice during which the app temporarily pauses all audio playback — for example, during your sleeping hours, study time, or prayer time.”

- Explanation must be:
 - Clear
 - Non-technical

Draft Version 1.0

WhisperBack

- Consistent with Shuffle and Schedule help patterns

Draft Version 1.0

WhisperBack

Edge Case Handling

- If Sleeping Mode starts while audio is playing:
 - Playback stops immediately
- If the app is restarted during Sleeping Mode:
 - Sleeping Mode remains active
- If the phone is locked:
 - Sleeping Mode continues to apply
- Notifications may optionally inform users:
 - When Sleeping Mode starts
 - When it ends

UX Principles

- No hidden behavior
- User always knows:
 - When Sleeping Mode is active
 - When playback will resume
- Sleeping Mode must feel protective, not restrictive

Performance & Load Constraints

- Background import for large no of clips
- UI must remain responsive
- Progress indicator must never block UI
- App must not crash or go black during import
- Graceful failure + retry option

Recording clips

- Recording quality need to be good.

Global Priority Order

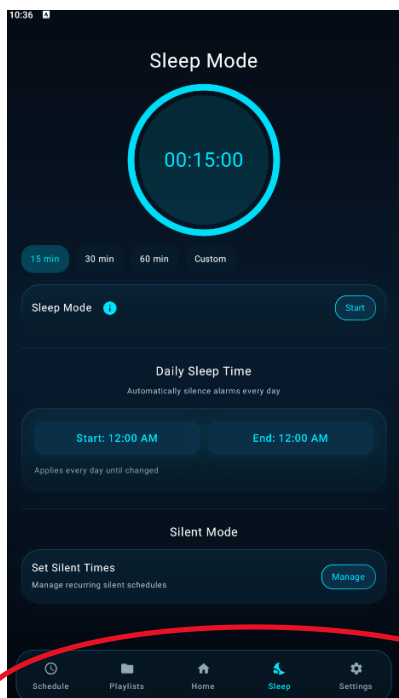

Playback Priority Order (Highest → Lowest)

1. App Inactive (OFF) – nothing plays
2. Sleeping Mode – temporary pause
3. Scheduled Playlists
4. Manual Playlist Playback

Cloud / Account Sync (Premium Feature for customer)

- Upload playlists to cloud
- Restore after reinstall
- Account-linked behavior
- Optional web access

Draft Version 1.0 WhisperBack

Only active button has
different color.
